

# VERSATILE

*The ultimate drainage and shock underlayment solution.*

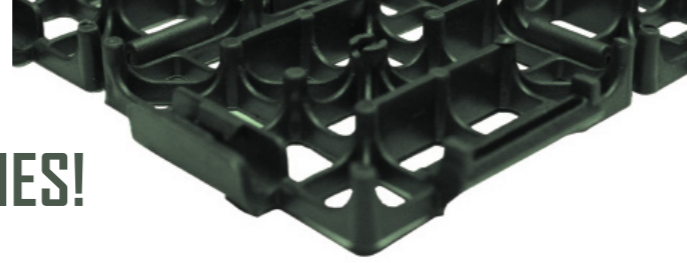

THE ULTIMATE  
SURFACE EXPERIENCE

IS IT A PAD? IS IT A TILE?

IT'S A TILE WITH SHOCK PROPERTIES!

SHOCK  
SHOCK  
SHOCK

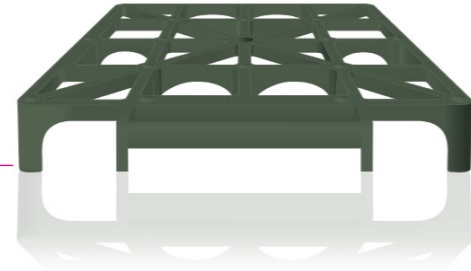

Some shockpad systems provide decent shock absorption, but poor drainage. Tile systems do the opposite. Selecting a sublayer solution has always meant making a compromise....until now. FieldTurf has designed VersaTile, the ultimate solution, which delivers the perfect mix of drainage and shock absorption.

WHAT MAKES VERSATILE

DIFFERENT FROM ALL THE REST

ALL THE REST  
ALL THE REST  
ALL THE REST

Optimal shock absorption

IMPACT ABSORPTION

Designed to mirror the leading shockpads, VersaTile proved to allow impact attenuation of 60% and even more.

Made from recycled turf

GREEN RECYCLED TECHNOLOGY

Made from recycled turf and thermoelastomers, VersaTile transforms end-of-life artificial turf fields. 50% of each tile is made from recycled turf and one recycled turf field can make 2 fields worth of VersaTile material.

Drains >72 000 mm/hour

MAXIMUM DRAINAGE

Versatile never interferes with water flow, offering maximum horizontal drainage with a free draining surface area of 82% (compared to only 35% in competitive products). Testing shows that VersaTile can drain 72 000 mm/hour.

16 year warranty

SUPERIOR DURABILITY

The VersaTile design allows for proper expansion and superior engineered supports on the bottom of the tile deliver long-term stability and load bearing properties to handle 40-ton trucks on your field with no or very low deformation.

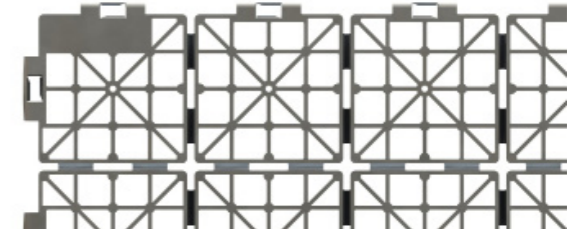

THE SCIENCE BEHIND VERSATILE

VERSATILE  
VERSATILE  
VERSATILE

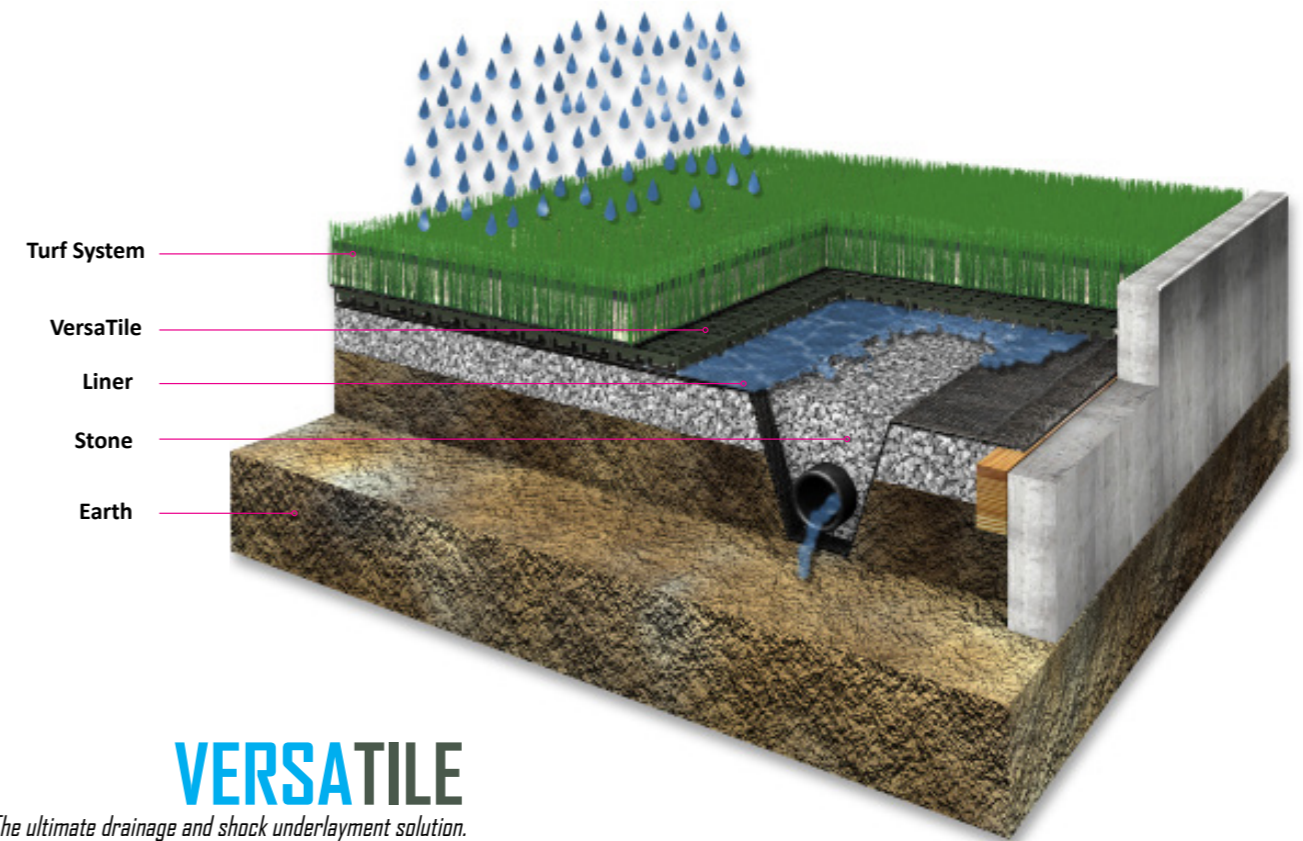

A single VersaTile is composed of 64 small squares that conform to the field, eliminating bridging. The 224 bi-directional thermal expansion U-joints expand and contract with changes in temperature. This eliminates the potential for heaving and/or buckling. VersaTile minimizes local load concentration. Like the magic of a bed of nails, the legs distribute the load to prevent puncture.

The design of the tile delivers 82% voids for unmatched vertical and horizontal drainage.

The unique angles built into each tile ensure the strength to resist bending and twisting.

VERSATILE

The ultimate drainage and shock underlayment solution.

Laser grade and compact to 95% proctor

Install non-permeable liner

Install tiles across center of field

Align and snap Smart Clips

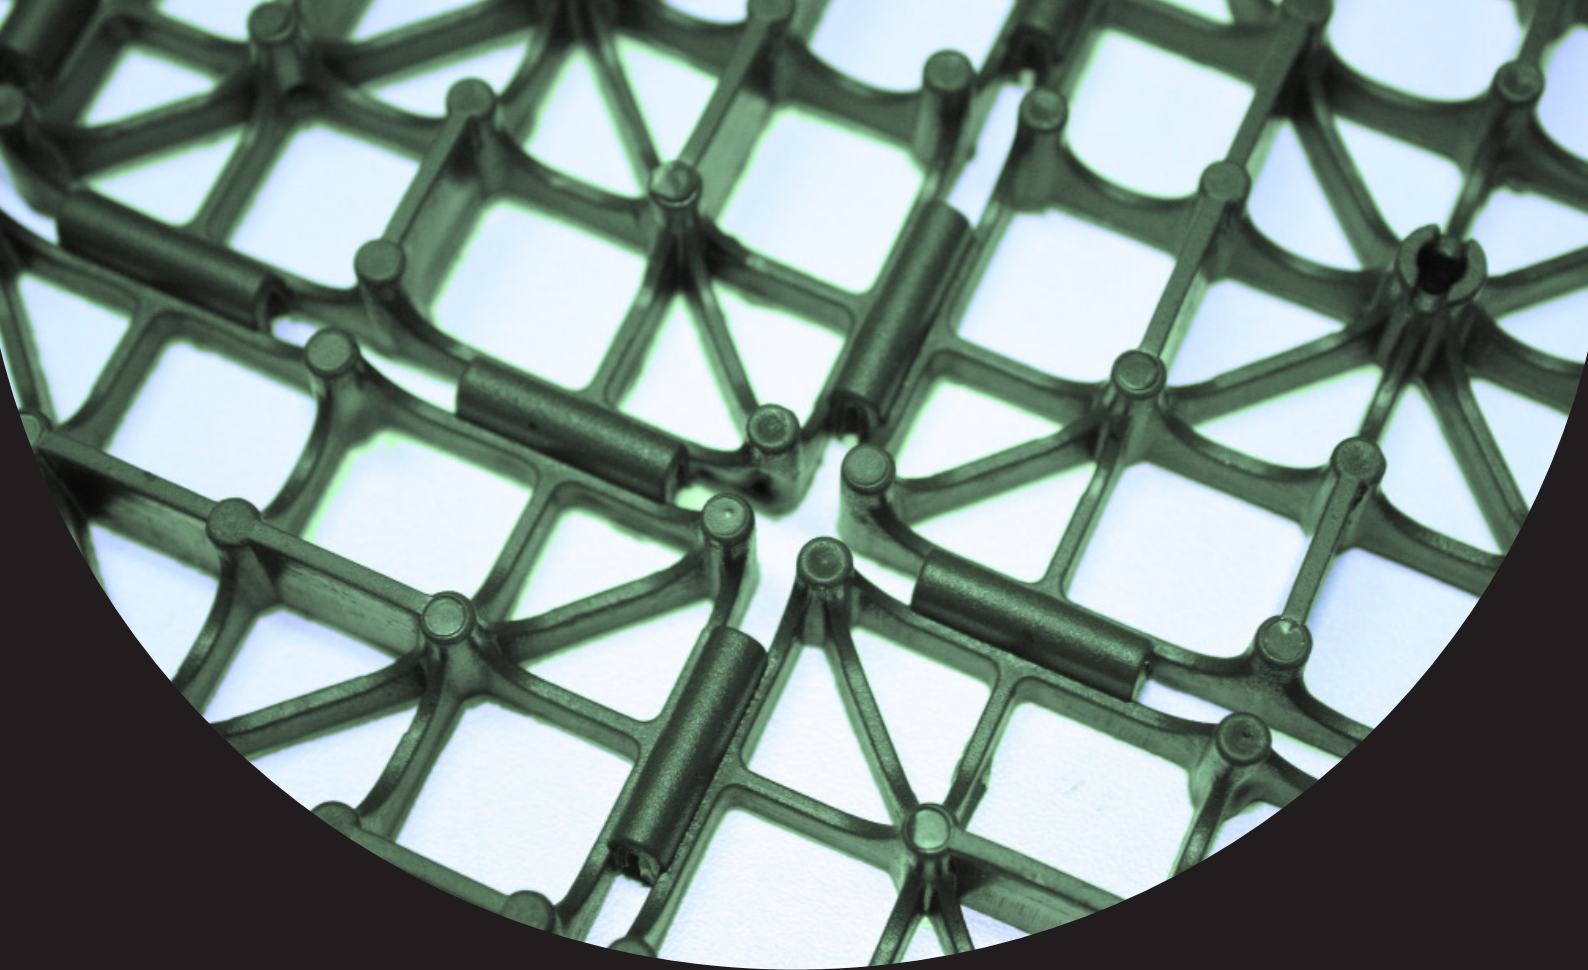

Install tiles

Install Turf

## VERSATILE

*The ultimate drainage and shock underlayment solution.*
